SUBSTANCE P
& NEUROKININS
MONTREAL '86

(JULY 21-23 JUILLET)

26th August, 1985

Dr. Harmon McAllister
Associate Research Director
The Council for Tobacco Research-U.S.A., Inc.
900 Third Ave.
New York, NY 10022
U.S.A.

Dear Dr. McAllister:

Thank you for your letter of July 23, 1985. I enclose our First Announcement for the Substance P symposium, which will be held in July, 1986. The Announcement gives details of the preliminary programme, including the names of invited speakers and the agenda for the various sessions as requested by you.

Our delegates, as you can see, will have a busy schedule. We have made an attempt to cover most significant aspects of past and current research in the field and expect this to be the most well attended meeting on the topic to date. The invited speakers are outstanding contributors to progress in the field. In addition the symposium represents the first attempt to discuss future directions on a collective basis. A steering committee for this symposium as well as for future directions has been set up for the first time. We expect this field of research to receive much greater public attention over the next few years because of the discoveries being made related to human health and disease through a broad range of clinical disciplines.

We look forward to hearing from you and trust the Council will appreciate the importance of "Substance P and Neurokinins" in relation to the fundamental issue of human health, including their possible relevance to the use of tobacco products.

Yours sincerely,

Preeti Sahgal, Ph.D.

Enc.
